

# Take Control.

Safer, simpler, faster solutions for  
mill startups and maintenance

*Powering Business Worldwide*

# Low-power, high torque auxiliary drives put your operators in control

Shutting down and starting up grinding mills for maintenance and inspections can be challenging and dangerous. Many companies still rely on manual techniques to move machinery through its cycles, such as jogging the start/stop button. This inefficient technique is not only hazardous for workers but potentially damaging to mechanical systems.

Eaton Inching Drive Systems are the safer, simpler, faster solutions. These low-power, high torque auxiliary drives allow you to control mill rotational movement from an inching pace to up to two revolutions per minute. They're designed and engineered to help elevate safety, prevent load freezing, simplify maintenance, extend component lifetimes and maximize mill uptime.

## Safety. First.

Eaton Inching Drives are designed to keep operators safe from accidental motor starts during mill maintenance and inspection. All drives feature a fail-safe brake, which engages automatically, as the operator's first line of defense. To further improve safety and operator control, a keyed interlock feature keeps machinery from starting accidentally, while a pendant controller with precision joystick gives operators unrestricted views of inching progress and mill position.

## Faster, easier maintenance improves mill uptime

A solid steel coupling engagement mechanism connects to the driven pinion with a fast and simple movement

With Eaton Inching Drives, your operators have the tools they need to take control of grinding mill maintenance and inspections:

- A pendant controller with infinitely variable speed allows operators to inch machinery along smoothly
- System monitors and condition indicators give operators complete control of the operation, ensuring accurate rotation and position holding
- Non-reversible hydraulic hose connections ensure proper operation by preventing the possibility of incorrect connections
- A single-point lift system makes drives portable and easy to move around your facility or operation

Eaton's long history of delivering solution-based products to the mining industry has resulted in innovative features designed to make your grinding mill maintenance and inspections safer, faster and easier.

- **Shiftable coupling** sleeve and **robust handle** make engaging and disengaging the unit a simple matter, reducing installation time
- **Filtration system** enhances drive portability, reduces risk of equipment damage and extends the lifetime of peripheral equipment
- **Quick connects** speed maintenance and reduce the risk of damage to equipment
- **Sealed reservoirs** and oil coolers help extend component lifetimes
- **Torque-limiting** and **fail safe brake** technology reduces the risk of equipment damage and maximizes component life
- **Bi-directional** rotation enables complete operator control

# The solutions you need. Customized to your exact specifications.

Eaton's well-known expertise at controlling massive loads with precision has produced a full line of Inching Drives engineered for a wide range of power and torque requirements. Find the drive that best fits the specifications of your grinding mill.

Power/Torque Level	Each Inching Drive comes with these standard features	Premium Package	Premium Plus Package
Electro-mechanical Up to 100HP 30,000 lb-ft	Electric motor, brake, gearbox, manual coupling combination	Standard package PLUS: <b>Shiftable coupling</b> - Easy connection, reducing installation time	Premium Package PLUS: <b>Variable frequency drive</b> - Enhances precision of positioning capability
	local controller	<b>Safety interlocks</b> - Prevents equipment damage	<b>Attached pendant control</b> - Increases safety and enhances flexibility of operation
Low Power Hydraulic 25-200HP 20,000-100,000 lb-ft	Open circuit hydraulic system, hydraulic motor, brake, gearbox, manual coupling combination	Standard package PLUS: <b>Shiftable coupling</b>	Premium Package PLUS: <b>Variable speed with attached pendant control</b>
	local controller	<b>Safety interlocks</b>	<b>Hydraulic overrunning load management</b> - Safer mill positioning
		<b>Quick connect for hydraulic/electrical components</b> - Enhanced portability and prevents excess oil loss between installations	<b>Filtration</b> - Extends lifetime of components
		<b>Torque limiting</b> - Protects pinion	<b>Oil cooler</b> - Enables continuous operation
High Power Hydraulic 100-500HP 50,000-1,000,000 lb-ft	Closed circuit hydraulic system, variable speed, hydraulic motor, brake, gearbox, manual coupling combination	Standard package PLUS: <b>Shiftable coupling</b>	Premium Package PLUS: <b>Attached pendant control with wireless option</b> - Increases safety and enhances mobility
	local controller	<b>Coupling guard with safety interlocks</b>	<b>Hydraulic overrunning load management</b> - Extends lifetime of components
		<b>Quick connect for hydraulic/electrical components</b>	<b>Sealed reservoirs</b> - Extends lifetime of components
		<b>Torque limiting</b>	<b>Self-contained oil filling system</b> - Eases maintenance
		<b>Filtration system</b> - Extends lifetime of components	<b>'Correct connection' indicators</b> - Prevents operator error
		<b>Oil cooler</b> - Enables continuous operation	

Optional add-ons available for any level: spare hub, extra base plates, additional interlocks

# The Eaton Advantage

## World class, Worldwide

Eaton supports Airflex® products with distributor locations in over 65 countries worldwide. Parts, experienced sales engineers and instant access to Eaton's power transmission knowledge base and manufacturing resources are as close as your local Eaton Airflex representative.

## Engineered to Last

Eaton combines 70 years of industrial clutch and brake experience with ground breaking, innovative and proven product designs to deliver efficient and reliable application solutions you can count on. All Airflex products are backed by service to ensure complete satisfaction.

## Custom Solutions

Eaton's Application Engineering team is available to work with your engineers to optimize an application solution. From a single component to a complete system solution, the Eaton Application Engineering and sales Teams are ready to help you get the job done right the first time and every time.

To learn more about how Airflex products can meet your application requirement, visit [www.eaton.com/ariflex](http://www.eaton.com/ariflex) or call 1-800-Airflex (247-3539).

Providing the highest reliability in harsh duty conditions for the lowest total life cycle cost

## Genuine Eaton Airflex Replacement Parts

When you purchase an Eaton product, you expect quality solution that will keep your application running at peak performance under the harshest operating conditions. Eaton continuously strives to produce the highest quality product available because that is what customers require.

There are various choices in the market for friction material and other replacements parts, but why risk performance. Genuine Airflex replacement parts are an exact and will ensure your clutch or break will continue to perform to original specifications for its entire operating life.

To find out about genuine Airflex replacements parts, contact your Eaton Airflex representative or an Airflex authorized distributor.
